

OUR PERSONAL QUANTUM REALITY

The spirit/soul/consciousness is separate from the various physical incarnations of yourself in the ALEs and lives on after death. Your one spirit is connected to all of your ALEs and to the one great consciousness.

I base this theory on quantum mechanics and in particular quantum superposition. We exist as both particles and waves (particle-wave duality). The world we see is the particle form of matter. However, we are, in the quantum sense, wave forms and probabilities in motion. We are timeless. Consciousness is fundamental and creates everything in the multiverse. Our worlds are constructed when we observe everything around us and we shape our own realities. I believe that the ALE can also go back in time so you can relive a portion of your life or forward in time. Consider the illustrations above and to the left. When I take my morning walk I'm really all of these men in different phases and different locations on my walk. I am movement and a waveform in motion. When someone observes me, they see a man, a physical particle being. In quantum reality, I'm a wave in motion. If you speed me up, I am just a blur, or a streak, like the flash or a wave.
